DETAILED ACTION

Response to Amendment

1. The amendment filed on 27 November 2006 has been accepted and entered.

Oath/Declaration

2. A new oath or declaration is not required. The oath/declaration is in compliance with 37 CFR 1.67(a) in light of the Application Data Sheet filed on 10 September 2004.

Drawings

3. The replacement drawings were received on 27 November 2006. These drawings are accepted and entered.

Allowable Subject Matter

4. Claims 9-16 allowed.
5. The following is an examiner's statement of reasons for allowance:

Regarding claims 9-16, the prior art of record does not disclose or reasonably suggest, along with the other claimed limitations, a two-dimensional ionizing particle detector comprising: namely, a liquid scintillator for which a chemical composition is chosen such that an average free path of primary scintillation photons is negligible compared with a diameter of the capillary.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Response to Arguments

6. Applicant's arguments, see pages 3-6 of the Amendment, filed 27 November 2006, with respect to claims 9-16 have been fully considered and are persuasive. The rejection of claims 9-16 has been withdrawn.

Regarding claims 9-16, neither Bay nor Karrellas disclose or reasonably suggesting a liquid scintillator chosen such that the chemical composition results in the average free path of the primary scintillation photons being negligible compared to the diameter of the capillary.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

US 2005/0105665 A1 – Grodzins discloses an ionizing particle detector wherein a liquid scintillator is chosen such that the length of the scintillation fiber is longer than the average free path of the scintillation photons.

US 6,388,260 B1 – Doty discloses that larger solid scintillation crystals provide better resolution than several smaller solid scintillator crystals.

US 4,686,695 A – Macovski discloses that photons with smaller mean free path lengths will be scintillated at shallower depths in a scintillator.
